

CyberArk Secure Browser

Name of Company: SquareX

Website: <https://sgrx.com/>

Name of Product: SquareX Enterprise

Date: 9/11/2024

Redefining Web Security: CyberArk + SquareX Integration

Combining CyberArk's identity centric secure browser, secure web session with SquareX's innovative cloud-based isolation and threat detection creates a comprehensive web security ecosystem. This integration achieves holistic web security that adapts to your environment and evolving threats.

Key Integration Benefits:

- Threat Intelligence Sharing. Integration creates a shared threat intelligence platform, combining insights browsing activities for enhanced threat detection.
- Detection and Blocking Malicious /Suspicious files
- Blocking Malicious Browser Extensions
- DLP policies for Files, Clipboard, Web & GenAI
- Identity Attacks policies
- Content Disarm & Reconstruction
- Adaptive files and URLs isolation based on risk
- Comprehensive audit trail on attack vector

How it works:

- Install and configure CSB/SWS : [Cyberark Secure Browser Instalaltion instructions](#)
- Contact SquareX team and get access to SquareX Enterprise including administrator credentials to management console to create policies and manage settings. Review SquareX documentation:
<https://enterprise.preview.sqrxenterprise.com/product/docs/intro>
- Review SquareX use cases/demo videos at: <https://sqrx.com>
- Invite users from SquareX management console
- Install SquareX browser extension in Cyberark Secure browser and login as invited user

- Refer to SquareX and CyberArk CSB (CYBR Secure Browser) documentation and integration video to create sample SquareX policies for web applications managed by Cyberark CSB\SWS
